

PricePac Program

Hydraulic Power Solutions. Quality Delivered Quickly.

 *We make motion work.*

Price
Engineering

An HPU Solution For Every Need.

The PricePac™ Program is our exclusive line of pre-configured, high-quality hydraulic power units (HPUs). Our team of 20+ engineers design each solution to meet your application and circuit requirements. We then assemble each unit with the highest quality components utilizing proven assembly standards and techniques.

Developed with you in mind, this program offers you three ways to configure HPUs that meet your exact needs.

PricePac

HPUs within 48 hours

By utilizing the latest design and assembly techniques in our dedicated manufacturing cell, we can build and ship many PricePac HPUs within 48 hours of receiving an order.

We design, engineer and pre-configure our PricePac HPUs with:

- 3-, 5-, 10-, 15-, 20-, 40- and 80-gallon reservoir sizes
- ½ HP to 50 HP electric motors
- Flows to 26.4 GPM
- Pressures up to 3,000 PSI
- 6- and 10-micron return filters
- Various options for manifold configurations, stack valves, heat exchangers, pressure switches, and electrical enclosures

PricePac Plus

HPUs within 10 days

PricePac Plus™ incorporates core elements of the standard PricePac design with a broader offering of components, features and customization to precisely meet your needs.

We can configure and build these systems typically within 10 days of ordering, giving you the modified system you need with the fast turnaround you'd expect with a pre-configured system. Plus, each one goes through engineering review to ensure it meets your specific application requirements.

We design, engineer and pre-configure our PricePac Plus HPUs with all the PricePac specifications plus:

- Flows to 50 GPM
- Pressures to 5,000 PSI
- Expanded options for pumps, valve manifolds, stack valves, voltages, filtration, heat exchangers and electrical control packages

Custom

Exactly what you need, when you need it

We can design and build a completely custom system to meet your exact application and environmental requirements – designed, built and shipped to meet your specific timeline.

We've designed systems exceeding 2,000 HP with flows in excess of 3,000 GPM, and we're experts in building test stands, control systems, lubrication systems, cooling systems, and any automation system you may require.

Performance. Guaranteed.

Our HPU's are backed by a leak-free guarantee,* plus one year of our preventative maintenance program.* Every HPU comes with a hydraulic schematic and operation manual for easy installation, operation and maintenance. In addition, we offer installation and start-up services to help you make the most of your investment.

* Contact Price Engineering for specific program details.

Expert Guidance And High Performance.

When you work with Price Engineering, you get a team of experts that guides you from product selection to fully engineered hydraulic power solutions. Our design expertise and quality assurance means you'll get the right solution that will deliver high performance for years to come.

1175 Cottonwood Avenue, Hartland, WI 53029-8309 (262) 369-3700 www.priceeng.com sales@priceeng.com

Price Engineering delivers leading-edge motion technologies that help manufacturers, especially American manufacturers, regain and maintain their competitive position. Because we are a complete partner – from plant services to high-level engineering – we excel at helping companies in many industries realize innovative motion solutions that once seemed impossible.

We bring these innovative solutions to life with a multi-disciplinary team that understands electrical, pneumatic and hydraulic systems, supported by our human-centered approach. Our industry experts guide customers from product selection through designing, building and implementing fully customized hydraulic, pneumatic, electrical control and automation solutions. And with our proactive maintenance, service and repair of industrial and mobile equipment, we deliver inspired ideas and answers.

Because in today's world, being competitive is not just about innovation – it's about bringing innovation to life quickly and efficiently. The world moves fast. We can help you keep up.
